*Senior Full-Stack Engineer | Contract & Contract-to-Hire | Angular, C#, .NET, SQL Server, Azure |
Legacy Modernization & Delivery Acceleration*

Professional Summary

Senior Full-Stack Software Engineer available for contract and contract-to-hire engagements. Proven delivery record across banking, FinTech, compliance, and insurance platforms on Angular, C#, .NET, SQL Server, and Azure.

Brings a rare combination of deep engineering execution and business-operator judgment from founding and running technology and insurance businesses. Steps into existing programs quickly, decodes legacy systems, and ships production-quality features.

Actively leveraging AI-assisted development (Claude Opus 4.7, Azure OpenAI) for measurable productivity gains. Former IBM Professional Services contractor and IBM MAP partner. Published in ComputerWorld InDepth and Mainframe Systems Journal.

Contract Value Snapshot

Rapid ramp-up in existing codebases with minimal handholding.

Legacy-to-modern stack translation with preserved business logic.

Full lifecycle delivery: requirements, design, build, test, deploy, support.

Front-end and back-end implementation across Angular and .NET APIs.

SQL-heavy systems support including stored procedures, tuning, and Entity Framework code-first migrations & Dapper with DbUp migrations.

Reliable execution in regulated domains: banking, FinTech, compliance, insurance.

AI-assisted SDLC in practice.

Core Skills

Primary Stack	Angular (v16–v20), TypeScript, C#, .NET Core/.NET Framework, SQL Server, T-SQL, Entity Framework & Dapper with migrations
Cloud & DevOps	Azure (App Services, SQL, Key Vault, Service Bus, Functions, Cosmos DB, Entra, Azure AI), GitHub Actions, Jenkins, Bitbucket, Azure DevOps, some AWS
API & Integration	REST, SOAP/WSDL, WCF, Swagger/OpenAPI, OAuth, JWT, Ping, Postman
Front-End	Angular Material, Telerik/Kendo, AG Grid, HTML, CSS/SCSS/BEM, RxJS, NgRx, Bootstrap, Ramping React (Jul-Aug 2026)
Data	SQL Server, Stored Procedures, SSMS, SSIS, SSRS, Cosmos DB, MongoDB, Entity Framework code-first migrations & Dapper with DbUp migrations
Security & Quality	OWASP, TLS/SSL, CheckMarx, XUnit, Jasmine/Karma, Application Insights
AI & Productivity	Claude Opus 4.7, Azure OpenAI, GitHub Copilot, prompt engineering

Domain Knowledge	FinTech, Banking Compliance (FINRA), P&C Insurance (Applied Epic, EZLynx, Appulate), VM Infrastructure Operations, WF Fraud/Misconduct & Compliance, MUFG Onboarding
Agile	Scrum, two-week sprint cycles, Jira, Confluence, peer review, CI/CD pipeline contribution

Experience

Voysays (voysays.com)

Founder | Architect | Full-Stack Engineer (personal SaaS) | Mar 2026 – Present

Solo-architected and deployed a production Angular 20 + .NET 9 + SQL Server + Cosmos DB SaaS platform on Azure. Live users, live telemetry, real deploys. Full ownership of architecture, data model, backend services, Angular UI, stored procedures, DbUp migrations, security posture, and production incident response.

- **End-to-end .NET / Angular delivery:** SQL Server + Cosmos hybrid data model, .NET 9 API with Dapper, Angular 20 UI with AG Grid, Microsoft Graph integrations, Azure OpenAI features.
- **Azure operating stack:** App Service, SQL, Cosmos, Key Vault, Application Insights, targeted rollback strategy.
- **AI-assisted SDLC in practice** — Claude Opus 4.7, GitHub Copilot, Azure OpenAI as full-lifecycle collaborators under senior human review. Verbose commit history documents the discipline.
- Serves as ongoing proof-of-work for AI-assisted delivery patterns applied to enterprise engagements.

MUFG Bank

New York, NY | Senior Full-Stack Software Engineer | Contract | Nov 2025 – Jun 2026

Greenfield rewrite of a legacy business system to Angular 20, C#, .NET, SQL Server, and Dapper in a small, high-output team.

Built all new Angular 20 screens – routes, services, components, forms, grid workflows, API bindings – against a redesigned modern data layer.

Designed and implemented new SQL structures and stored procedures to support modernized features and stable production behavior.

Utilized Claude Opus to accelerate architecture decisions, API development, SQL stored procedure generation, repository/service layer implementation, and code review activities within a large-scale Angular 20 and .NET modernization initiative.

FIS Global

Jacksonville, FL | Senior Full-Stack Software Engineer | Contract | Mar 2024 – Aug 2025

Delivered enterprise platform features across a FinTech-scale codebase using Angular, C#, and Entity Framework (code-first migrations) for the data layer, spanning remote VM lifecycle operations across AWS and Azure, including start/stop/restart controls and service-state automation.

Built UI and backend workflows for IP allowlisting and related controls integrated with Harness and Akamai.

Executed full delivery lifecycle work: requirements, design, build, code review, CI/CD pipeline progression, production support, and sprint commitments.

Wells Fargo (Compliance Platform - greenfield RegEd replacement)

Summit, NJ | Senior Full-Stack Software Engineer | Contract | Sep 2022 – Jan 2024

Greenfield build of a large internal compliance platform — a full replacement for the third-party RegEd system — supporting registered-person licensing and regulatory workflows.

Contributed to event-driven/domain-driven design sessions and implemented Angular/.NET components aligned to enterprise architecture standards.

Delivered accessibility and front-end quality improvements using WCAG practices, BEM, and SCSS in collaboration with UX and product teams.

Wells Fargo (Fraud/Misconduct Platform)

Summit, NJ | Senior Full-Stack Software Engineer | Contract | Dec 2021 – Jul 2022

Delivered front-end and back-end enhancements to an existing misconduct **and fraud** platform using C#, Angular, Telerik/Kendo, TypeScript, and SQL Server. Also provided **production support for the associated IBM mainframe Fraud system** — a batch environment processing **over one billion records per week**.

Implemented features across a complex stored-procedure-heavy data layer and Azure Service Bus worker patterns.

Supported critical operational workflows including batch reliability dependencies in a regulated environment.

Insurance Office of America

Lake Mary, FL | Senior Full-Stack Software Engineer | Contract | Feb 2021 – Dec 2021

Delivered CRM enhancements and production fixes in a custom insurance platform with complex integration requirements.

Built and maintained SOAP/XML integrations with EZLynx and resolved NHibernate unit-of-work/caching issues in live workflows.

Partnered effectively with distributed teams, including remote collaboration with Belfast engineering resources.

Vista Market Advisors

Odessa, FL | Senior Full-Stack Software Engineer | Contract | Aug 2018 – Feb 2021

Backfilled and completed delivery of a partially built custom platform, taking ownership of both feature completion and production hardening.

Led key Azure modernization work, including migration of on-prem SQL to Azure SQL and Storage SDK integration in C# services.

Delivered major conversion/integration work across Applied Epic ecosystem components, including large T-SQL migration logic and third-party rater/API connectivity.

Earlier Career — Technology and Business Leadership

Built and led a NYC technology contracting firm to \$4 million in services revenue.

Delivered enterprise work as an IBM Professional Services contractor and MAP partner.

Published in ComputerWorld InDepth and Mainframe Systems Journal.

Founded, scaled (3x), and sold a retail P&C insurance agency.

Brings rare engineering plus business-operator perspective to regulated, client-facing delivery environments.

Education

Norwich University, Northfield, VT

Bachelor of Science — Business Administration / Economics

Certifications

Currently pursuing AZ-204 Azure Developer Associate certification
