Senior Full-Stack Engineer & AI-Assisted Delivery Lead | Angular, C#, .NET, SQL Server, Azure | Banking, FinTech & Regulated-Domain Delivery

Professional Summary

Senior full-stack engineer with a strong delivery record in banking, FinTech, and regulated environments — Wells Fargo (Fraud/Misconduct + greenfield compliance/registration), MUFG (greenfield legacy rewrite), FIS Global — on Angular, C#, .NET, SQL Server, and Azure.

Practicing AI-assisted software development daily — using **Claude Opus 4.7 (via Claude Code)**, **GitHub Copilot**, and **Azure OpenAI** as a full-SDLC pair-programmer for architecture, schema design, backend services, Angular UI, stored procedures, refactoring, code review, test coverage, and production debugging. Not experimenting — shipping.

Currently architecting and operating voysays.com, a production Angular 20 + .NET 9 + Azure OpenAI + Cosmos DB + SQL Server platform, **AI-accelerated, personally architected**, and **deployed on Azure**. Live users, live telemetry, live migration discipline. Real evidence of an AI-driven SDLC, not a slide deck.

At **MUFG Bank**, extended that same practice to enterprise banking — one of the first engineers on-site using Azure OpenAI and Claude in the wild to accelerate a **greenfield rewrite** of a legacy business system into Angular 20 / .NET.

Former IBM Professional Services contractor and MAP partner. Published in *ComputerWorld InDepth* and *Mainframe Systems Journal*.

Contract Value Snapshot

- **AI-assisted full-lifecycle delivery** — architecture, code generation, refactor, review, test, docs — measurably faster ship rate with senior-level quality gates.
- Rapid ramp-up in existing Angular / .NET codebases with minimal handholding.
- Legacy-to-modern stack translation with preserved business logic.
- Full lifecycle delivery: requirements → design → build → test → deploy → support.
- Deep front-end (Angular v16–v20) and back-end (.NET Core / .NET 9 / SQL Server) implementation.
- SQL-heavy systems expertise: stored procedures, tuning, migrations, DbUp, Entity Framework migrations-first.
- Reliable execution in regulated domains: **banking, FinTech, compliance, insurance**.

Core Skills

AI-Assisted SDLC	Claude Opus 4.7 (Claude Code) , GitHub Copilot, Azure OpenAI, prompt engineering, agentic development patterns, AI-driven code review, AI-authored migrations & stored procedures
Primary Stack	Angular (v16–v20) , TypeScript, C#, .NET Core / .NET 9 / .NET Framework, SQL Server, T-SQL, Dapper, Entity Framework (code-first / migrations-first)
Front-End (Angular heavy)	Angular Material, Telerik/Kendo, AG Grid, RxJS, NgRx, HTML, CSS/SCSS/BEM, Bootstrap. WPF/XAML, Razor, Ramping React (active coursework Jul–Sep 2026).
Cloud & DevOps	Azure (App Services, SQL, Key Vault, Service Bus, Functions, Cosmos DB, Entra, Azure AI / OpenAI), GitHub Actions, Jenkins, Bitbucket, Azure DevOps, some AWS
API & Integration	REST, SOAP/WSDL, WCF, Swagger/OpenAPI, OAuth, JWT, Ping, Postman
Data	SQL Server, Stored Procedures, SSMS, SSIS, SSRS, Cosmos DB, MongoDB, DbUp, EF migrations
Security & Quality	OWASP, TLS/SSL, CheckMarx, SonarCube, XUnit, Jasmine/Karma, Application Insights
Regulated-Domain Experience	Banking (Wells Fargo Fraud/Misconduct + Compliance, MUFG/Onboarding), FINRA APIs, FinTech (FIS Global), P&C Insurance broker-side (Applied Epic, EZLynx, Appulate)
Agile	Scrum, two-week sprint cycles, Jira, Confluence, peer review, CI/CD pipeline contribution

Experience

Voysays (voysays.com) — Founder, Architect & Full-Stack Engineer (AI-Assisted SDLC)

Mar 2026 – Present

Solo-architected, engineered, and deployed a production Angular 20 + .NET 9 + Azure OpenAI CRM/outreach platform on Azure at voysays.com, with Claude Opus 4.7 (Claude Code) as a full-lifecycle pair-programmer. Every architecture decision, data-model choice, migration, security posture, and production incident owned personally; AI accelerated implementation without owning judgment. Over 90,000 lines of production code and 800+ deploys shipped in the first 20 weeks — architecture, backend, UI, data, tests, migrations — as a single-engineer + AI team. Real-world, live

evidence of running an AI-driven SDLC end-to-end. Live demo and codebase walk-through available on request.

- **Architected end-to-end:** SQL Server + Cosmos DB hybrid data model, .NET 9 API layer with Dapper, Angular 20 UI with AG Grid v35, Microsoft Graph integrations, agentic outreach layer against Azure OpenAI.
- **Owned every layer of the stack:** stored procedures, DbUp migrations, repositories, services, controllers, Angular components/services/pipes, RxJS pipelines, SCSS — with AI accelerating implementation under my design and review.
- **Refactor, feature add, bug fix, code review** — all executed with AI collaboration under human judgment. Verbose commit history documents the SDLC discipline.
- **Solved non-trivial complexity:** multi-tenant data model, Microsoft Graph mail send/receive integration, LinkedIn ingestion, NDR (Non-Delivery Report)/DSN (Delivery Status Notification) bounce parsing + suppression pipeline, Cosmos-backed conversation store, agentic drafting from historical retrieval.
- **Deployed on Azure** — App Services, SQL, Cosmos, Key Vault, Application Insights telemetry, targeted rollback strategy, tombstone semantics on people-filtering SPs.
- This project serves as a personal proof-of-work platform for AI-assisted delivery patterns that transfer directly to enterprise banking engagements.

MUFG Bank — Senior Full-Stack Software Engineer (Contract)

New York, NY | Nov 2025 – Jun 2026

Greenfield rewrite of a legacy business system off its original environment onto a modern Angular 20 + C# / .NET + SQL Server + Dapper stack. Small, high-output team. **One of the first engagements at MUFG where AI-assisted development was practiced in the wild on production banking work.**

- **Used Azure OpenAI and Claude daily** to accelerate architecture decisions, API and endpoint development, SQL stored procedure generation, repository/service-layer implementation, refactor passes, new-code authorship, and code-review activity.
- **Built all new Angular 20 screens** from scratch — routes, services, components, forms, grid workflows, API bindings — against a redesigned modern data layer.
- **Designed and implemented new SQL structures and stored procedures** to support the modernized feature set and stable production behavior.
- **Executed both refactor and net-new development** as the legacy logic was translated into maintainable TypeScript + .NET services.
- Demonstrated to peers and leads that AI-assisted development can meet enterprise-grade quality bars in a regulated banking environment.

FIS Global — Senior Full-Stack Software Engineer (Contract)

Jacksonville, FL (remote) | Mar 2024 – Aug 2025

Delivered a large number of enterprise platform features across a FinTech-scale codebase using **Angular, C#, and Entity Framework (migrations-first)** for the data layer.

- Feature work spanning remote VM lifecycle operations across AWS and Azure — start/stop/restart controls, service-state automation, IP allowlisting integrated with Harness and Akamai.
- Full delivery lifecycle across every sprint: requirements, design, build, code review, CI/CD pipeline progression, production support.
- Contributed EF migration authorship and data-layer refactors as the platform evolved.

Wells Fargo (Registered-Person Compliance Platform — greenfield RegEd replacement) Senior Full-Stack Software Engineer (Contract)

Summit, NJ | Sep 2022 – Jan 2024

Greenfield build of a large internal compliance platform — a full replacement for the third-party **RegEd** system — supporting registered-person licensing and regulatory workflows for the bank.

- Delivered Angular and .NET features against enterprise-architecture standards, participating in event-driven and domain-driven design sessions from the ground up.
- Contributed to accessibility and front-end quality using WCAG practices, BEM, and SCSS in collaboration with UX and product teams.
- Ownership of feature slices end-to-end: UI, API, data, tests, review.

Wells Fargo (Fraud / Misconduct Platform) — Senior Full-Stack Software Engineer (Contract)

Summit, NJ | Dec 2021 – Jul 2022

Delivered front-end and back-end enhancements to an existing misconduct and fraud platform using **C#, Angular, Telerik/Kendo, TypeScript, and SQL Server**. Also provided **production support for the associated mainframe Fraud system** — a batch environment processing **over one billion records per week**.

- Feature delivery across a complex stored-procedure-heavy data layer.
- Azure Service Bus worker patterns for asynchronous processing.
- Batch reliability and critical-workflow support in a regulated environment.

Insurance Office of America — Senior Full-Stack Software Engineer (Contract)

Lake Mary, FL | Feb 2021 – Dec 2021

CRM enhancements and production fixes on a custom P&C insurance platform. Built and maintained SOAP/XML integrations with EZLynx. Resolved NHibernate unit-of-work/caching issues in live workflows. Collaborated with Belfast-based engineering resources.

Vista Market Advisors — Senior Full-Stack Software Engineer (Contract)

Odessa, FL | Aug 2018 – Feb 2021

Backfilled and completed a partially built custom P&C insurance platform. Led Azure modernization — on-prem SQL → Azure SQL migration, Storage SDK integration in C# services. Delivered major conversion and integration work across the Applied Epic ecosystem, including large T-SQL migration logic and third-party rater/API connectivity.

Earlier Career — Technology & Business Leadership

- Built and led a NYC technology contracting firm to **\$4M in services revenue**.
- Delivered enterprise engagements as an **IBM Professional Services contractor** and **IBM MAP partner**.
- Published in **ComputerWorld InDepth** and **Mainframe Systems Journal**.
- Founded, scaled 3x, and sold a retail P&C insurance agency.

Education

Norwich University, Northfield, VT

B.S., Business Administration / Economics

Certifications

Currently pursuing **AZ-204 Azure Developer Associate**
